

Press "START" to search for the stops closest to you. By pressing "Without GPS" you will have a less accurate but faster search because GPS is not used.

The closest stop is the first in the list, followed by the others in ascending order of distance. You need to select the stop for which you want to see the trips

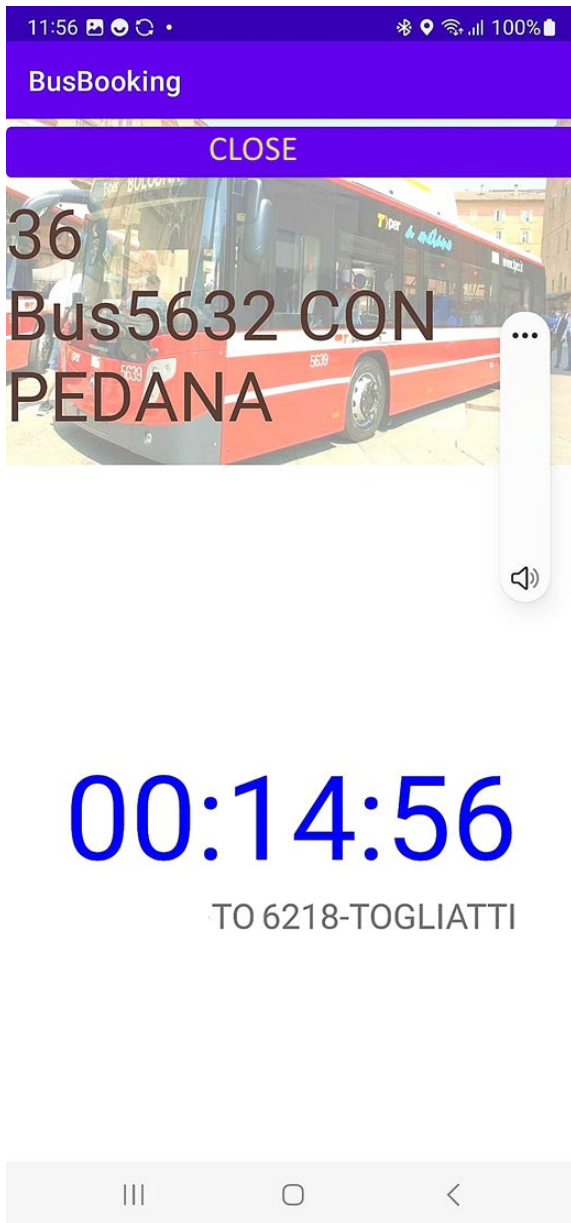

Once a stop has been selected and loading is complete, the next trips for that stop will be shown

The hourly information derives from an estimate made starting from satellite data; it is possible to get assistance to follow the progress of the forecast.
Just tap on the chosen ride.

For satellite-tracked trips it is possible to request assistance. Just "tap" on the chosen one.

Once you book assistance for the ride, the remaining time needed to arrive at the chosen stop will be shown.

The assistance guarantees:

- Monitor the remaining time
- Be notified via acoustic signal if the waiting time, estimated via satellite, undergoes a significant change
- Be notified by visual indication (<1 minute) and audible signal when the bus is arriving (<2 minutes)
